

ECFanGrid
 COMPACT • EFFICIENT • RELIABLE

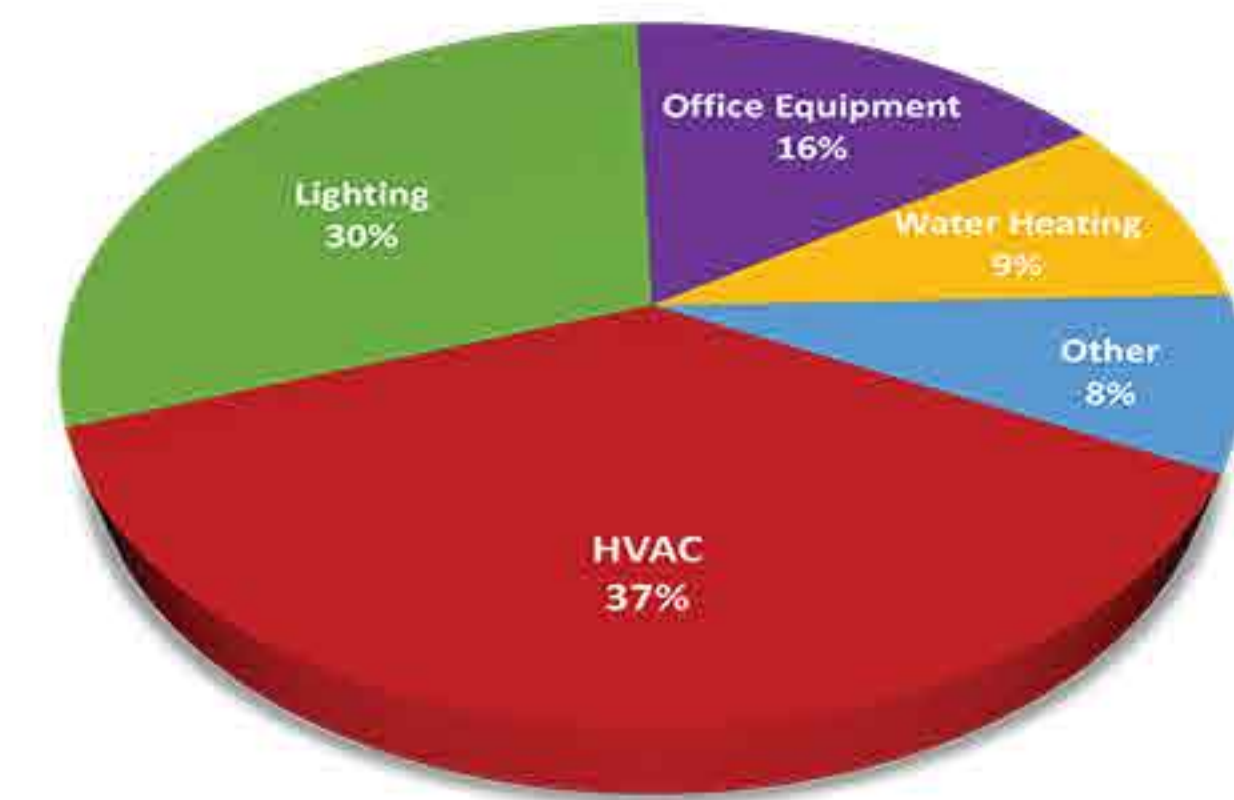

UPGRADE YOUR AIR HANDLING UNIT AND SAVE

Upgrading to a high efficiency heating, ventilation and air conditioning system is one of the largest energy savings opportunities for building retrofit and energy efficiency improvements.

According to *Save on Energy Ontario*, HVAC can represent between 25% and 70% of the monthly electricity consumption for most non-industrial buildings.

Average Commercial Energy Usage

A Rosenberg ECFanGrid is ideally suited for use in Retrofit projects, particularly where a single large radial fan is being replaced. It includes all the components you need to make your next retrofit project a success.

We offer three configurations of ECFanGrid:

- New AHU equipment (Pic.1)
- Pre-engineered Retrofit Kit (Pic.2)
- Unobox – stackable modular self-contained EC Fan (Pic.3)

ECFanGrid Features:

- Energy efficient EC Motor (ECM)
- On demand speed ready
- Keep your ducts and AHU casing
- Quick installation
- No demolition needed
- Less downtime risk

Talk to your HVAC design-build professional about the energy savings your building can achieve when retrofitting with Rosenberg's ECFanGrid.
